7. Summary of event-

The seminar was planned for SE, TE & BE Civil Engineering students. The seminar was on "Introduction to GIS & Remote sensing". This course aims at introducing concept, principles and applications of Geographic Information Systems (GIS). Course also aims to develop the skill of using software and other tools of GIS in students. A geographic information system (GIS) is a computer system for capturing, storing, checking, and displaying data related to positions on Earth's surface. By relating seemingly unrelated data, GIS can help individuals and organizations better understand spatial patterns and relationships. Remote sensing is the process of detecting and monitoring the physical characteristics of an area by measuring its reflected and emitted radiation at a distance (typically from satellite or aircraft). Special cameras collect remotely sensed images, which help researchers "sense" things about the Earth.

There were total 120 participants present for the session. The session was from 10.30 am to 12.30 pm. The session was interactive type. Participants ask several questions to him. The participants enjoyed the session a lot.
